

If you are experiencing problems remotely opening the RMIS Instrument search than you may need to update your Internet Explorer to the latest version (IE11)

[What Version of Internet Explorer Do I Have?](#)

## **How Do I Update Internet Explorer?**

You can update Internet Explorer by downloading and installing it from Microsoft:

[Download Internet Explorer](#) [Microsoft]

**Important:** You should only update Internet Explorer from Microsoft.

Several legitimate websites offer Internet Explorer downloads but many not-so-legitimate websites do as well. Your best bet is to update Internet Explorer directly from the browser's developer - Microsoft.

That's really all there is to it. Just download and install the installation [file](#) from Microsoft, or automatically update via Windows Update.

Internet Explorer will update automatically, keeping all of your favorites, cookies, form history, and saved passwords intact.

You do not need to uninstall your current version of IE to update Internet Explorer.

Incremental updates to Internet Explorer, like those you might see on [Patch Tuesday](#) that correct small bugs or fix security issues, are always best received via [Windows Update](#).
